

SECTORAL REPORT

ELECTRICITY

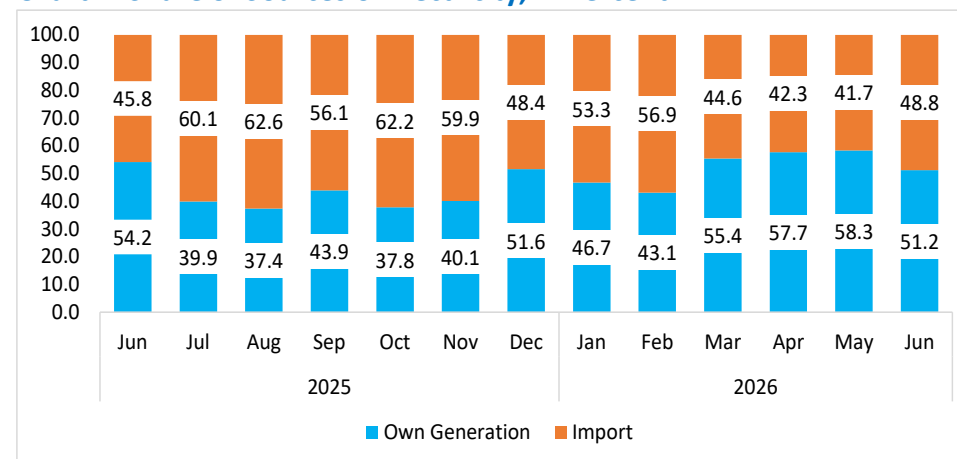

June 2026

Chart 1: Electricity Sources Composite Index, Percentage Change¹

- The **Electricity Sources Composite Index**, consisting of domestic electricity generation and electricity imports, declined by 7.1 percent in June 2026, reversing the 3.3 percent increase recorded in May 2026. On an annual basis, a 10.9 percent index was recorded, which is lower than the index of a corresponding month of 2025 (Chart 1).
- During the month under review, total electricity supplied to the domestic economy amounted to 462 564 MWh, representing a decline from 497 886 MWh recorded in May 2026, but an increase compared to 417 049 MWh supplied in June 2025. This reflects a month-on-month contraction and a year-on-year expansion in the total electricity supplied to the domestic economy.

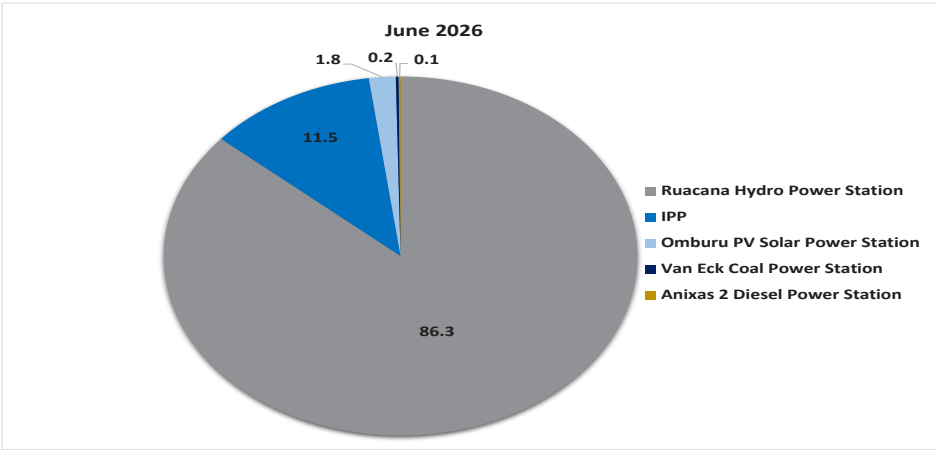

Chart 2: Share of Sources of Electricity, in Percent

- During June 2026, domestic/own electricity generation contributed 51.2 percent (236 774 MWh) of the total electricity supplied to the domestic economy, while electricity imports accounted for the remaining 48.8 percent (225 790 MWh). This composition remained broadly consistent with the shares recorded in May 2026 and June 2025, with own generation continuing to constitute the largest source of electricity supply.

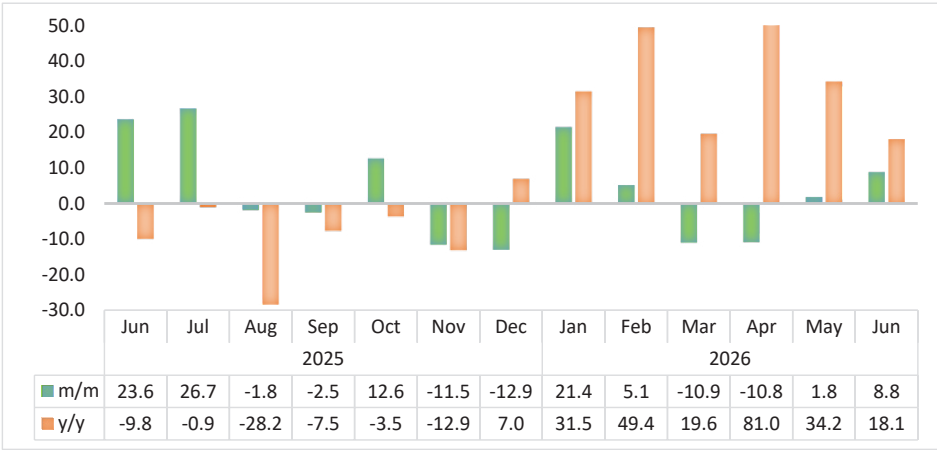

¹ This chart is limited to 25 percent for better readability.

Chart 3: Share of Electricity for Own Generation, in Percent

- In June 2026, total domestic electricity generation stood at 236 774 MWh. The Ruacana Hydro Power Station remained the principal source of electricity generation, producing 204 350 MWh, which accounted for 86.3 percent of total domestic electricity output. Independent Power Producers (IPPs) ranked second, generating 27 328 MWh or 11.5 percent of total output, followed by the Omburu PV Solar Power Station, which produced 4 303 MWh, representing 1.8 percent of total domestic electricity generation (Chart 3).
- The Van Eck Power Station ranked fourth among domestic generation sources, producing 472 MWh, equivalent to 0.2 percent of total electricity output. The Anixas 2 Diesel Power Station followed in fifth position with 297 MWh, contributing 0.1 percent of total generation during the month under review. Meanwhile, the Anixas 1 Diesel Power Station recorded the lowest output, generating 24 MWh, representing 0.01 percent of total domestic electricity generation.

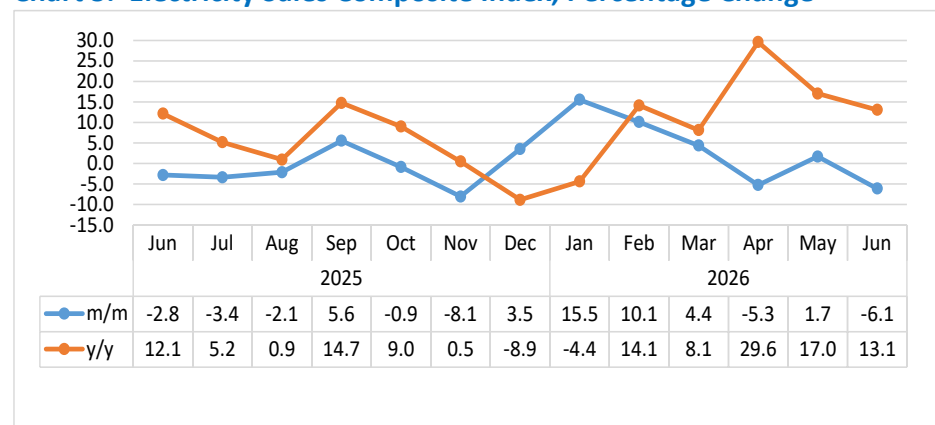

Chart 4: Electricity Import Index, Percentage Change²

- The **Electricity Import Index** grew by 8.8 percent in June 2026 on a month-on-month basis, following a 1.8 percent increase recorded in May 2026. On an annual basis, the index registered an 18.1 percent increase compared to the corresponding month in 2025 (Chart 4).
- In volume terms, Namibia imported a total of 225 790 MWh of electricity during the month under review.
- ZESCO Limited of Zambia remained Namibia’s leading source of imported electricity, accounting for 38.2 percent of total electricity imports. Eskom Aggeneis of South Africa ranked second with a 37.1 percent share, followed by the Zimbabwe Power Company (ZPC), which supplied 19.0 percent of total electricity imports. Eskom Orange River and the Southern African Power Pool (SAPP) Day-Ahead Market contributed 5.1 percent and 0.5 percent of total electricity imports, respectively.

² This chart is limited to 50 percent for better readability.

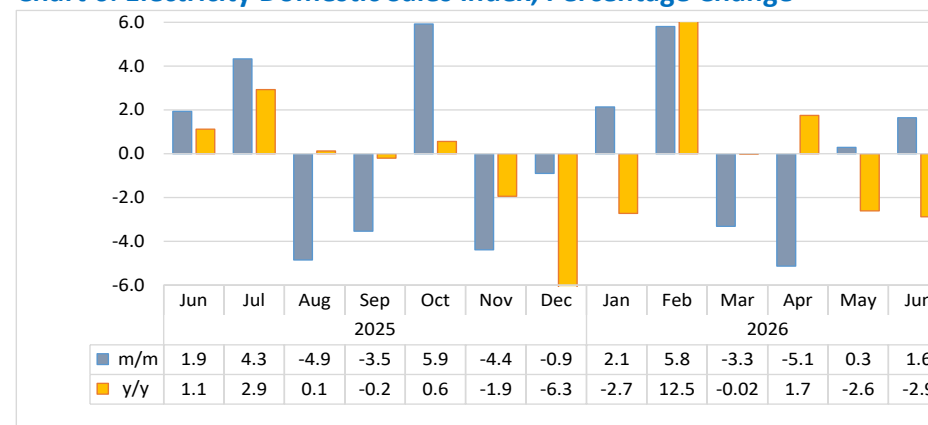

Chart 5: Electricity Sales Composite Index, Percentage Change

- The **Electricity Sales Composite Index** declined by 6.1 percent on a month-on-month basis in June 2026, reversing the 1.7 percent increase recorded in May 2026. On an annual basis, however, the index increased by 13.1 percent compared to the corresponding month in 2025 (Chart 5).
- In absolute terms, total electricity sales amounted to 417 029 MWh in June 2026, down from 444 295 MWh recorded in May 2026, but substantially higher than the 368 848-MWh sold in June 2025. This reflects a month-on-month decline and a year-on-year increase in electricity sales.

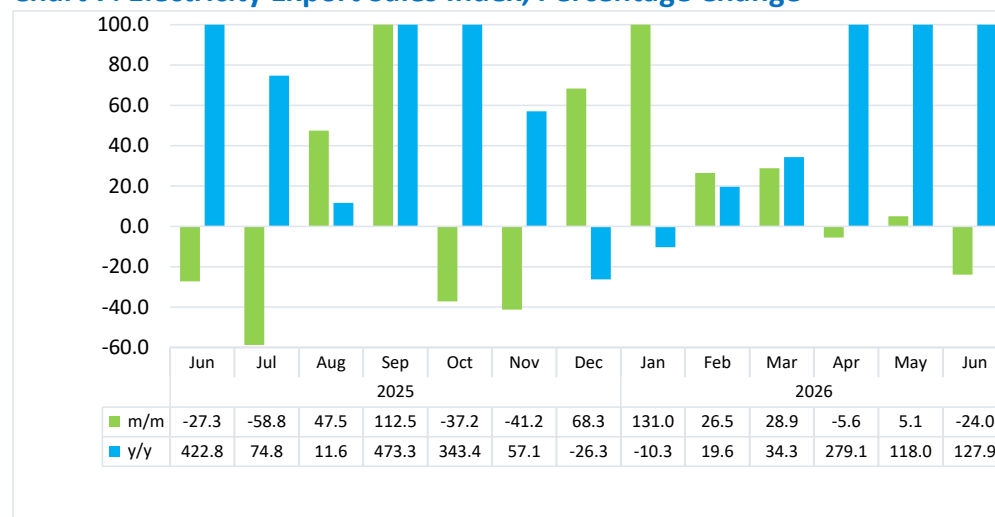

³ This chart is limited to -6 and 6 percent for better readability.

Chart 6: Electricity Domestic Sales Index, Percentage Change³

- The **Domestic Electricity Sales Index** increased by 1.6 percent in June 2026, following the 0.3 percent marginal increase recorded in May 2026. On a year-on-year basis, however, the index declined by 2.9 percent compared to the corresponding month in 2025 (Chart 6).
- In volume terms, domestic electricity sales amounted to 314 531 MWh in June 2026, up from 309 437 MWh recorded in May 2026, but below the 323 864-MWh sold in June 2025. Redistributors – LPU remained the largest consumers of domestically supplied electricity, accounting for 69.6 percent of total domestic electricity sales. The mining sector ranked second with a 22.2 percent share, followed by Eskom Orange River, which contributed 3.7 percent.
- Electricity supplied to farms under the main supply category accounted for 1.3 percent of total domestic electricity sales during the month under review. The water pumping category ranked fifth, contributing 0.9 percent of total domestic electricity sales.

Chart 7: Electricity Export Sales Index, Percentage Change⁴

- The **Electricity Export Sales Index** declined by 24.0 percent on a month-on-month basis in June 2026, reversing the 5.1 percent increase recorded in May 2026. On an annual basis, however, the index registered a substantial 127.9 percent increase compared to the corresponding month in 2025 (Chart 7).
- In absolute terms, Namibia exported a total of 102 498 MWh of electricity during the month under review. The Southern African Power Pool (SAPP) STEM Sales remained the principal export destination, accounting for 97.9 percent share of total electricity exports. The Botswana Power Corporation ranked second with a 1.1 percent share, while Eskom (Rietfontein Interconnection, South Africa) and Angola accounted for 0.5 percent and 0.4 percent shares, respectively, of total electricity export sales.

⁴ This chart is limited to 100 percent for better readability.

Methodology : Graphical and tabular analysis

Data Sources : The data source for the volume of electricity is sourced from NamPower. These are data on domestic and export sale, Own Generation (local production) and import sources. The Production is in Kilowatts per hour (kWh) for all the variables.

Index calculation: The index of sales and sources weighted uses the volume data of 2015.

Conversion : 1 basis point = 0.01 percent
